Online event program

October 1

"Career and development of a nurse»

In modern conditions of healthcare development, the problem of professional development of medical personnel is extremely important. The solution to this problem involves developing the employee's personal potential, professional growth, and career development. Under the section of "career and development of a nurse" we will form a broader view of the career of medical worker, which can be considered not only as a job growth, but the growth of professionalism and the possibility of horizontal career promotion of an employee within the organization that can contribute to retain good expert in the case when opportunities for growth career in the near future in the organization is not expected. Professional development of the staff, including career growth, can be promoted by a personal individual development plan of the employee.
